***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over O'shea et al. (6,189,045) and in view of Bourbonnais et al. (6,446,036).

As to claim 1, O'shea teaches a method (Fig.3) of receiving an application from a server at desired language and data type (content), comprising;

Using a data consumer (12) to access application on a server (10);

Determining a language preference of the data consumer (20; Col.3, lines 5-15);

Converting (18) the data type to the desired language and format of the consumer (Col.2, lines 49-53) and transmitting the (text) converted data type to the data consumer, wherein the data type includes different languages and data formats that are desired by the consumer (Col.5, lines 18-35). O'shea doesn't explicitly teach where the format includes regional settings (dates, currencies... etc). Bourbonnais, however teaches translating a web page text from one language to another including converting the dates and currencies (Col.4, lines 16-22). Therefore it would be obvious and, one skilled in the art would appreciate the advantage of modifying O'shea's format converter to include converting regional settings, in view of Bourbonnais, for the purpose of

presenting to the user a document with its dates and monetary symbols also translated to the user's desire.

As to claim 2, O'shea teaches sending a user profile from the client to the server and also where the format conversion includes considering different time zones or different countries, (Col.6, lines 63-67), and Bourbonnais teaches where regional information are converted.

As to claims 3-4, O'shea and Bourbonnais teach data type formatting and regional settings conversion and returning the data for transmission and a software for performing the method (Fig.3).

Claims 5 -8 are analogous claims 104, that are addressed above, and are rejected for the foregoing reasons by O'shea in view of Bourbonnais.
